

Screenshot

TGAC Browser Screenshots

The image displays a collage of screenshots from the TGAC browser interface. On the left side, there is a BLAST search results table with columns for query ID, subject ID, alignment score, and other parameters. The table lists several entries, each corresponding to a specific sequence alignment. On the right side, there are several overview plots and charts. These include bar charts showing sequence coverage or abundance, line graphs representing sequence profiles or trends, and sequence alignment visualizations showing the alignment of query and subject sequences. The plots are arranged in a grid-like fashion, providing a comprehensive overview of the search results and sequence characteristics.
